

First browse through or choose (search function) the content provider or providers whose content suggestion you want to share or view... I.E. **BeHizy TenNappel, CannCon, Moseder**.... Etc. . . . Then using your mouse, highlight the link (triple click... unique) or group of links (drag cursor) to share and click on cntrl-C to copy or right mouse click and copy. Next, click on the social media site you want to copy it to. Use cntrl -V or right mouse click to paste on the Social Media site of your choice. Come back and post to as many sites as we have 'quick-links' to. You can also do email blasts just as easily. Video or videos will appear in social media (well formatted and swipe-able so a single post can contain multiple documents in a small area. LET'S DO THIS!

ADVANCED:

1. You can edit the scroll! To gather Content providers info together that is separated by other entries, just highlight and delete until they are next to each other, then copy n paste!
2. You can highlight URL's and drag them into the browsers address window and view posts on site! Then just hit the back button to return to page.
3. REALLY COOL@@ !! At the bottom right hand corner of the newsreel area you see 3 or 4 diagonal lines, click and hold with your mouse button to create a CUSTOM size area for viewing... all other attributes adjust automatically!!!

I'll post a full help file as soon as possible.

Thanks for your participation!
